

1. **Start the Oracle server:** Using the username and password given during DBMS laboratory sessions.

2. **Database and Table Setup:**

```
CREATE USER student_db IDENTIFIED BY password;  
GRANT CONNECT, RESOURCE TO student_db;
```

```
CREATE TABLE info (  
  id NUMBER PRIMARY KEY,  
  name VARCHAR2(50)  
);
```

```
INSERT INTO info VALUES (1, 'Stephi');
```

```
COMMIT;
```

3. **JDBC Driver Setup**

For IntelliJ:

Step 1: Go to File > Project Structure > Libraries > +

Step 2: Add the '.jar' file.

For VS Code:

Step 1: Create a 'lib\' folder in your project directory

Step 2: Copy paste the '.jar' file into this directory

4. **Sample JDBC Program**

```
import java.sql.*;
```

```
public class DatabaseApp {
```

```
    public static void main(String[] args) {
```

```
        String url = "jdbc:oracle:thin:@//orcl:1521/orcl"; //important change for Oracle  
server
```

```
        String user = "root";
```

```
        String pass = "your_password";
```

```
        try (Connection conn = DriverManager.getConnection(url, user, pass)) {
```

```
            System.out.println("Database Connected Successfully!");
```

```
            Statement st = conn.createStatement();
```

```

        ResultSet rs = st.executeQuery("SELECT * FROM info");

        while (rs.next()) {
            System.out.println(
                "ID: " + rs.getInt("id") +
                " | Name: " + rs.getString("name")
            );
        }

    } catch (SQLException e) {
        System.err.println("Connection Failed!");
        e.printStackTrace();
    }
}
}

```

5. Make sure the Oracle server is running

6. Run the Java program

If you are using command line use these commands:

```

javac -cp "lib/ojdbc17.jar" DatabaseApp.java //compiling
java -cp "lib/ojdbc17.jar" DatabaseApp //execution

```
